PROJECT NAME
Hilton Garden Inn

Engineered for strength...
designed for beauty

The Hilton Garden Inn in Frederick, Maryland needed to expand its guest parking lot while integrating it with the surrounding landscape. The project utilized CornerStone® 100 to maximize the potential of the land and build boundary walls on all sides. Geogrid reinforcement and CornerStone's built-in design flexibility, added support while creating walls that ranged up to 26 feet above grade in height. This combination allowed the developer to solve a number of problems on site including multiple elevation changes to successfully complete the project.
