PROJECT NAME
Weatherford Place

Engineered for strength...
designed for beauty

The Weatherford Place project in Atlanta, Georgia utilized the engineering features as well as the diverse creative design possibilities of CornerStone® 100. Curved, sweeping stairways flanking a raised peninsular outlook were just one feature of this unique and striking design. The project converted a sloping site into a level enjoyable, garden and sitting area. Maximum wall height was ten feet and CornerStone® helped overcome a number of construction challenges on the site including a steep slope below the wall.
