PROJECT NAME
Gateway Crossing

Engineered for strength...
designed for beauty

In 2001 the Hagerstown Housing Authority set out to rehabilitate the city's distressed West End. This included the revitalization of a park and playground located in the city's Gateway Crossing community.

With design and function top of mind, the project team selected CornerStone® 100 to transform the space into a well landscaped focal point and social gathering place for families.

Because of its proven performance, and ease at which it can be installed, CornerStone helped the wall installer seamlessly align the wall units to the cast in place steps creating a polished look.
