PROJECT NAME

4th Avenue Wall
Reconstruction

Engineered for strength...
designed for beauty

Founded in 1780, the town of Brunswick, now rich in history, was once a major railway hub made famous for its proximity to the C&O Canal.

Time and environmental elements have taken their toll on many of the town's infrastructure including its original retaining walls, many of which now need to be replaced.

The retaining wall on 4th Avenue was no exception. The wall leaned so badly that residents were afraid to drive along side it. After monitoring it for some time, the city's engineers determined that the wall needed to be replaced.

City officials selected CornerStone® 100 to rebuild the 4th Avenue wall because it proved to be both cost effective and because it complimented the town's traditional appeal.
