PROJECT NAME
Blue Sky Condominium

Engineered for strength...
designed for beauty

Streetside Developments required a retaining wall for the Blue Sky Condominiums to hold up the parking lot and back driving lanes. The creative design incorporates corners, curves, a wrought iron fence and 8 pedestrian bridges giving the development a very unique architectural appeal. The contractor chose CornerStone 100 because there are no clips, pins or lips to deal with. The Secure Lug always provides great alignment. The pedestrian bridges allow home owners to get from their car to the front door while maximizing the space on the development.
