# FrogStone™ Solution

&gt; &gt; &gt;

**PROJECT NAME**  
Warson Woods Park

Engineered for strength...  
designed for beauty

The Township of Warson Woods near St. Louis Missouri, used FrogStone™

Rock Face to enable a number of improvements to their municipal park.

One portion defined a children's playground while a reinforced wall provided support for a winding concrete walkway that skirted a public tennis court. A number of sloping areas had to be accounted for in the overall plan and a fence installed adjacent to the top of the wall completed the design.

FrogStone's design and engineering flexibility complemented the curving green space of the site.
