Technologies

Engineered for strength...
designed for beauty

With the expansion of the Megasys business building, the city of Calgary required that additional parking stalls be created to accommodate its growth. Megasys looked to minimize the footprint of the new parking stalls, while enhancing the aesthetics of the development.

Megasys chose MagnumStone™ for this project because of the system's minimal geogrid use, speed of installation, and attractive lines. This application features a pelican coloured anti-graffiti coating, which complemented the adjacent concrete, as well as a wrought iron railing, seamlessly installed through the core of the MagnumStone™ block.
