PROJECT NAME
GlenEagles Development

Engineered for strength...
designed for beauty

GlenEagles Development required a strong, resilient retaining wall solution to provide the foundation for their new luxury home development. The unparalleled strength and durability of the MagnumStone™ System made it the premier choice.

The development sits atop the elevated MagnumStone™ Wall System, accentuating the breath taking views of Alberta's Rocky Mountains. The ambitious wall system spans more than 23,000 sq. ft, with heights exceeding 40 ft, and features a color coating to compliment an existing wall tie-in.
